**How to save an picture in JPG instead of PNG ?
As you know, the quality in JPG is little better so i
wish to keep my picture in JPG but on the site it
seems i can only save my picture in PNG.**

From the Menu: File -> [Save Image](#)

This will give you options for file type.

Please note however, if the image is in PNG format, (for example, if you made the background transparent)

switching to JPG will not improve the quality but it will remove the transparency.
