

Editing

Do I have to remove Quicktime7Reader from my computer before a saved .gif with loop will play.

I'm not aware of any interactions with Quicktime7Reader and GIFs. In Windows, many people report problems viewing GIFs with the windows photo viewer. It doesn't support gifs. Instead, open GIFs with your web browser. For example, by dragging it into an open web browser window, or by associating GIF files with your web browser instead of photo album.
