

Editing

How do I move an image from left to right with a transparent background? I am trying to add text to an image but because the image is toward the left side, the text I am trying to add will not fit. I simply need a mover tool to move my image slightly to the left! When I go to eraser tool there is a pan tool where I can do just that but when I apply changes it goes back to the way it was. Any way to move an image horizontally to the right?

It sounds like you want to expand the canvas size of the image so that you can draw more on the photo.

[Edit -> Resize Canvas](#) will do just that. Be sure you position your image on the right side of the enlarged canvas.
