

Editing

how can I change a negative film to a black and white picture

You can easily process negatives with Lunapic's negative filter.

From the menu: [Filters -> Negative](#)

(note, if you process a positive, it will turn it into a negative!)

Also, if you want to make sure it's grayscale, you can apply that filter as well

From the menu: [Filters -> Black and White](#)

Unique solution ID: #1255
