Editing

I want smooth transparent edges. When I use the transparent tool, I get blocky edges.

When images are started as JPG or GIF, the transparency option will produce a GIF. Gif doesn't

support smooth edges.

To fix that, I recommend starting with a PNG (or converting to it with lunapic:

http://lunapic.com/?convert)

That will produce better edges when using the transparency tool.

http://lunapic.com/?transparent
