Editing

how do I scale my image that's 768 wide to 1024 high at 200 ppi to meet the below requirements ....when I change the ppi fm 200 to 72 it becomes crunched/stretched...help

Digital Images: Must be RGB in JPG format with a maximum width of 1024 pixels and a maximum height of 768 pixels at 72 dpi. NO EXCEPTIONS. Digital images will be projected for the judges using an HD projector on a 6' x 4' screen.

Online images do not have a PPI or DPI setting. That is for displaying on monitors and for printing. (Dots Per Inch or Pixels Per Inch)

We only deal with Width and Height in pixels.

If you don't want to stretch the images, you should use the Scale option. If the aspect ratio (width/height) is wrong, you'll need to crop the images first.
