

## Editing

### **I need to turn low density photo into HD. What is the maximum pixel or dimension I can add to a photo on your site? Are there other methods for this purpose?**

If your screen resolution can handle it, you can scale images up to 2000x2000 pixels on LunaPic. HD is considered **1920 × 1080** , and you can use the [Scaling Tool](#) to resize images larger. While it may have some artifacts, it does try to upconvert the image as best it can.
