Feature Requests

I am trying to upload a picture on LUNAPICS website, but the file size is reduced significantly (by almost a tenth). And when I download the edited pic, the file size is too small to create a large canvas print. Is there any way I can upload the pic file in its original size (3.5MB)?

Hi, LunaPic optimizes images for online use, so there are limits set on the size of images.

Maximizing your browser window before going to LunaPic.com will give you the maximum setting for you.
